

Optional Assignment

After taking Communications Technology for at least two years, you have been asked to complete over 20 projects. Some of these projects were great and some could be better. Here is your chance to make an impact. Your challenge is to create a new Communications Technology project for Grade 11 or 12. The project must be unique and different from any previous project that you have completed in Communication Technology. Units that the project covers may be one of the following:

Photoshop, Graphic Design, Indesign/Illustrator, Audio, Video/Video Editing, Animation, Packaging, Live Production, Careers

After coming up with an Idea, you will make an assignment sheet, listing criteria that the students must follow and any instructions needed for the assignment. You then have to make a rubric (use my new rubric template from my site) to help you. Remember the 4 categories.

When you have completed the Assignment and Rubric please supply them to me digitally as Pages, Word or WordPerfect documents that I can edit to fit the curriculum.

This Optional Assignment can be worth an additional 5% to your overall mark.
